

AUTONOMOUS UNDERWATER VEHICLE
Introductory Session

October 08, 2017

Why AUV?

- Unmanned, self propelled vehicles
- Operate independently for a period of few hours to several days
- Used in oceanographic and data collection in marine environments.

AMAZING
FACTS
TO BLOW YOUR MIND

- ❖ **Deepest AUV: Neerus**
- ❖ **Hybrid design with both autonomous and remote controlled capabilities**
- ❖ **Reached the Mariana Trench in 1998 with a total of 40 km optic fibre cable.**
- ❖ **Max depth of current day submarine is around 750m**

Future of AUV

- Japan creating an AUV with cutting edge technology for mineral exploration and monitoring nuclear reactors
- NASA planning to send an AUV to Jupiter's moon Europa to explore the world beneath its icy surface.

OUR HISTORY

PROTOTYPE I

PROTOTYPE II

OUR OBJECTIVE

- ▶ **To promote underwater robotics as an educational interest and future research sector.**
- ▶ **To build a robot which can autonomously carry out underwater surveillance, detect, locate and grab objects.**
- ▶ **To bring in new ideas and publications on marine technology by providing this platform to people who wish to innovate.**
- ▶ **To participate in various National and International competitions.**

COMPETITIVE EVENTS

Student Autonomous underwater Vehicle (SAVe)

Organizer: NIOT, Chennai under Ministry of Earth Science Date: October, 2018

Venue: NIOT, Chennai

Singapore AUV Challenge

Organizer: IEEE & OES

Date: March, 2018

Venue: Singapore Polytechnic, Singapore

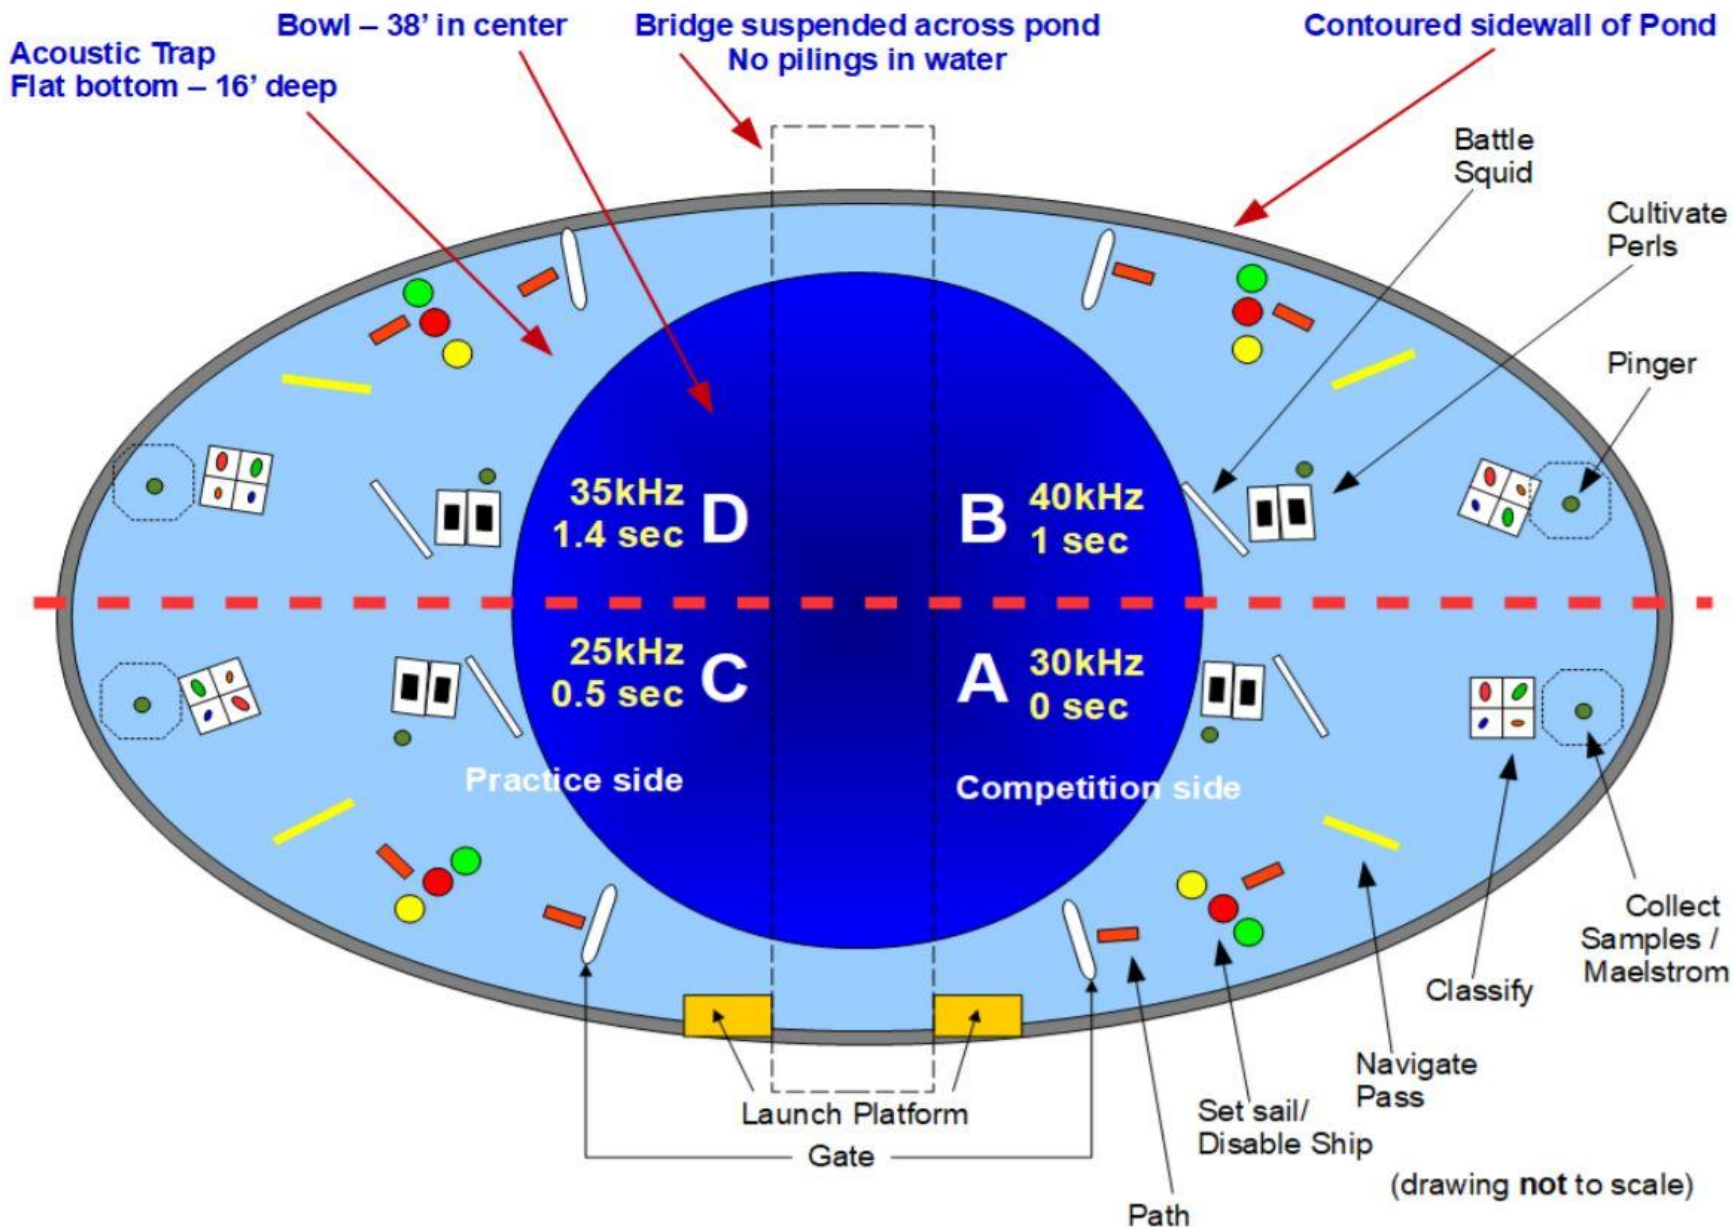

International RoboSub Competition

Organizer: AUVSI Foundation

(Co-sponsored by U.S. Office of Naval Research)

Date: Last week of July, 2018

Venue: SSC Pacific TRANSDEC, San Diego, CA

TASKS IN THE GAME ARENA

MECHANICAL

Mechanical Subsystem

- ▶ Robot Designing
- ▶ Design Analysis
- ▶ Waterproof Casing
- ▶ Waterproof Connectors
- ▶ Pneumatic System

Robot Designing

Used for designing the robot before fabrication to ensure that everything is picture perfect

- 3-D view of the robot
- Orthographic and isometric views of parts
- Selecting the material required

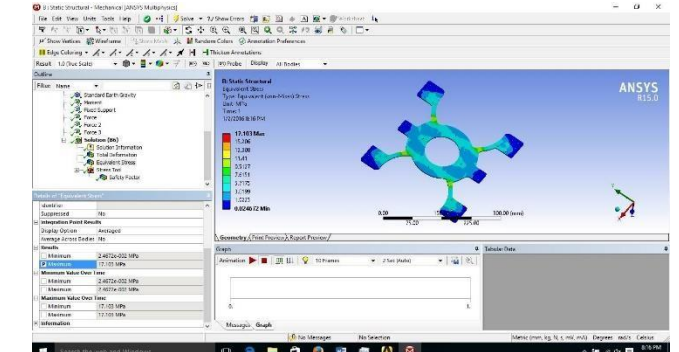

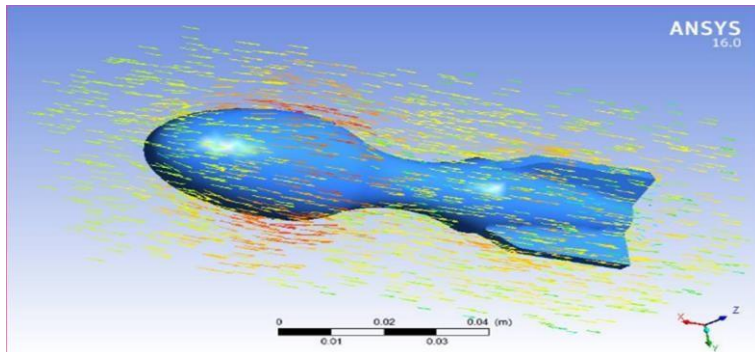

Design Analysis

Used for analyzing the design for optimizing it's performance in terms of:

- Coefficient of Drag
- Centre of Mass
- Center of Buoyancy
- Vehicle Speed
- Weight

Varun's Design Specification

Name:	Varun
Degree of Freedom:	5
Number of thrusters:	6
Weight:	41.550 kg
Buoyancy:	+1%
Dimensions (in mm):	1430*434*560

Custom- Made Waterproof Casings

Manufactured using in-house facilities available at Tinkering Lab and 4-i Laboratory under Mechatronics Lab

Front Camera Casing

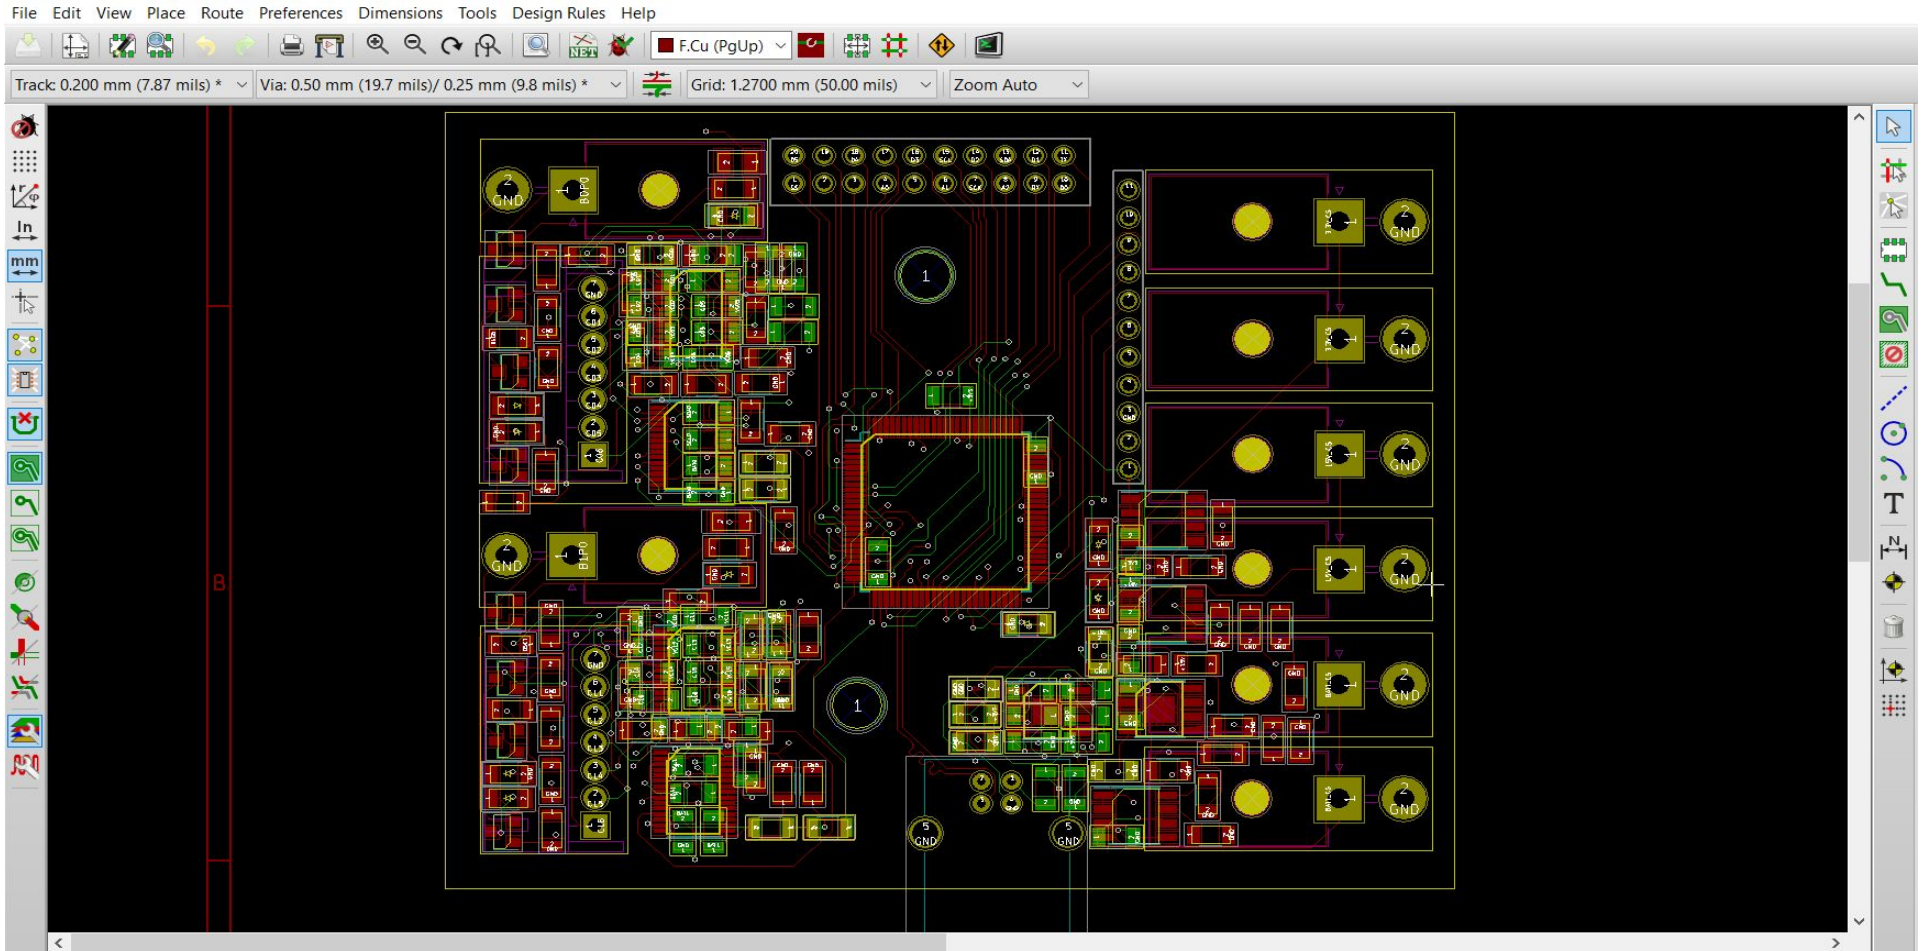

Hull Cap with
Connectors

Main Pressure
Hull

ELECTRICAL

What do we do?

- **Battery and power management**
- **Sensors**
- **Actuators**
- **PCB Designing**

Battery Management

LiPo Battery

Pros:

- High capacity to weight ratio
- Multiple cell configurations available
- Rechargeable
- High discharge rate

Cons:

- Highly sensitive to:
 - Over charge
 - Over discharge
 - Temperature
- Relatively expensive

Power Management

- **Thrusters** 0-12V, Up To 8A
- **NUC** 12-19V, Up To 5A
- **Arduino, Camera, IMU** 5V, Up To 2A
- **Pressure Sensor** 3.3V, Less than 1A

Actuators

Thrusters

Motor driver

Pneumatics

Sensors

Pressure Sensor

Gives depth of vehicle under the water

Camera

Gives view of arena

IMU

Gives orientation, acceleration and angular velocities of the bot

Hydrophone

Used for acoustic localization

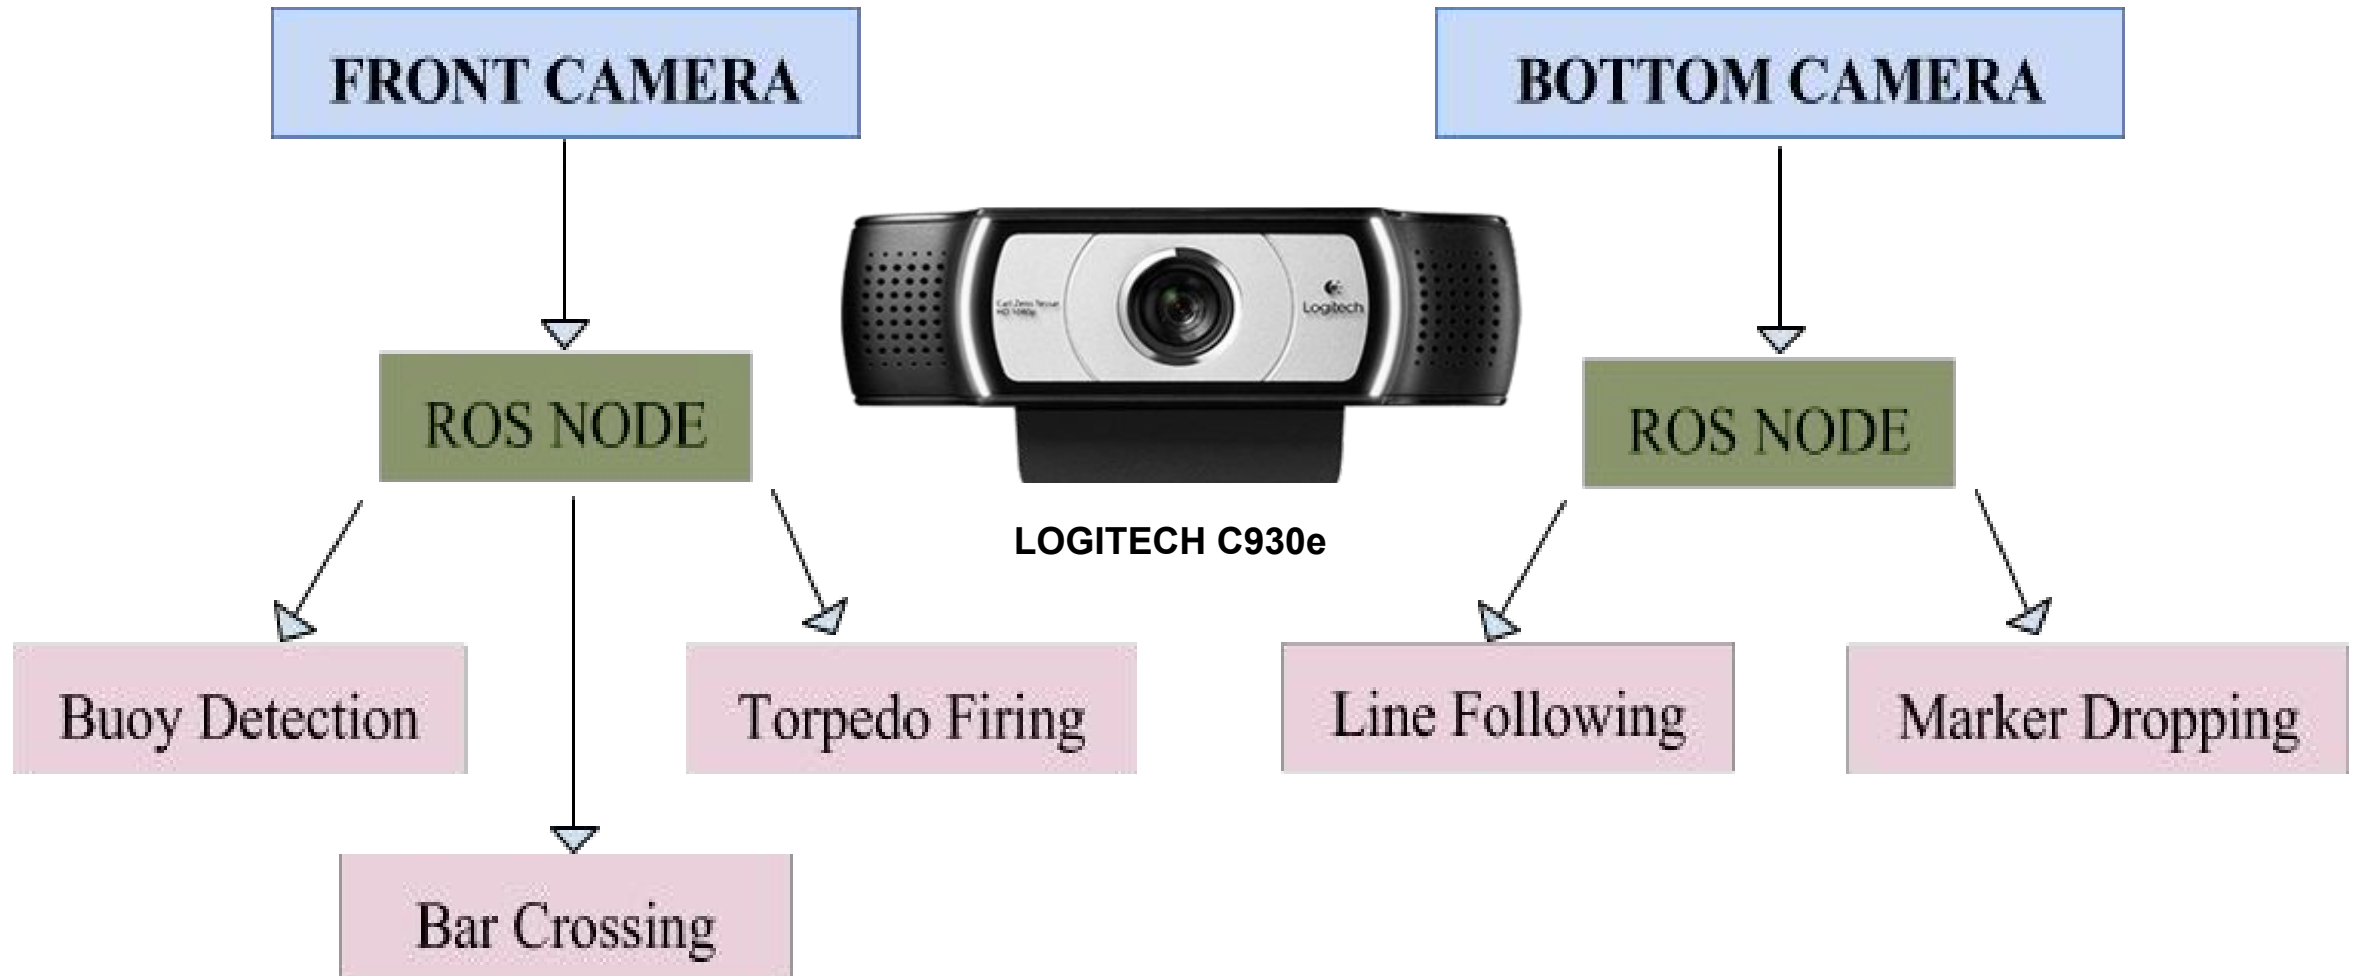

PCB Designing

- Custom specifications
- Compact size
- Easy debugging
- Easy integration into other systems in the vehicle

SOFTWARE

Vision

Samples

Line Detection

Shape Detection

Buoy Detection

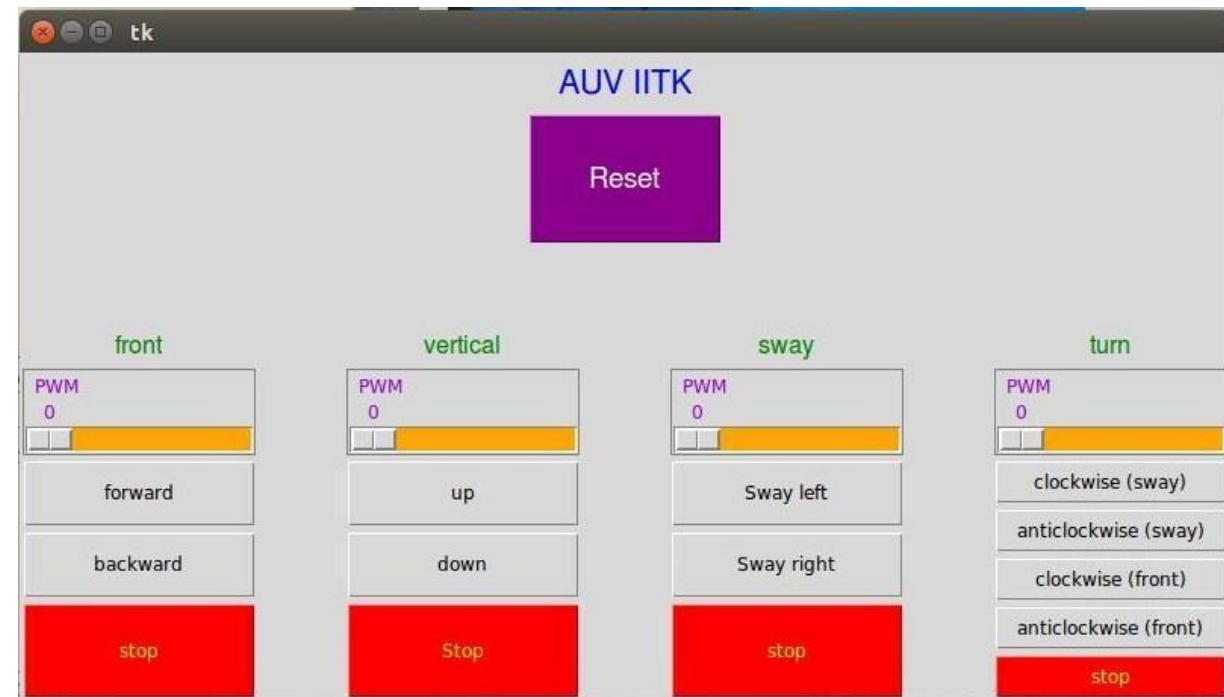

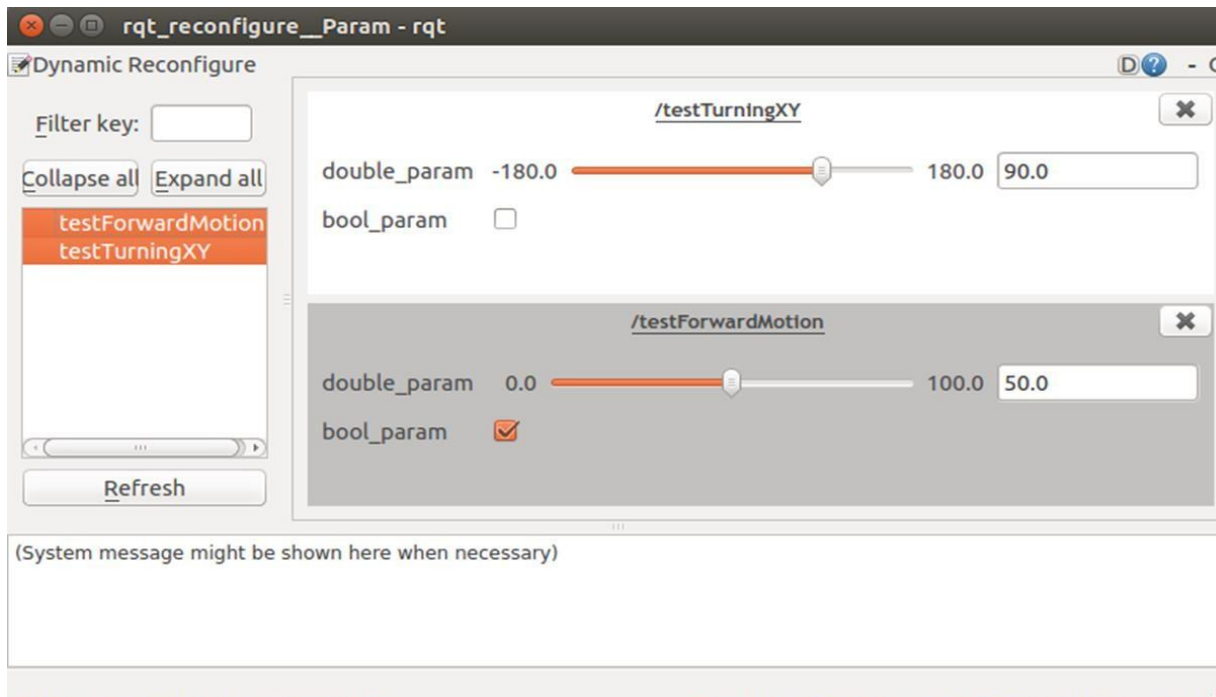

ROBOT OPERATING SYSTEM

- Flexible framework for writing robot software
- Collection of tools, libraries, and conventions that aim to simplify the task of creating complex and robust robot behavior.
- Has built-in messaging system that manages details of communication between distributed nodes via anonymous publish/subscribe mechanism.
- Easier to capture data published by some task (node) to a file, and then republish that data from the file at a later time.

Graphical User Interface(GUI) :: ROS

We use this GUI for testing our Bot's Motion.

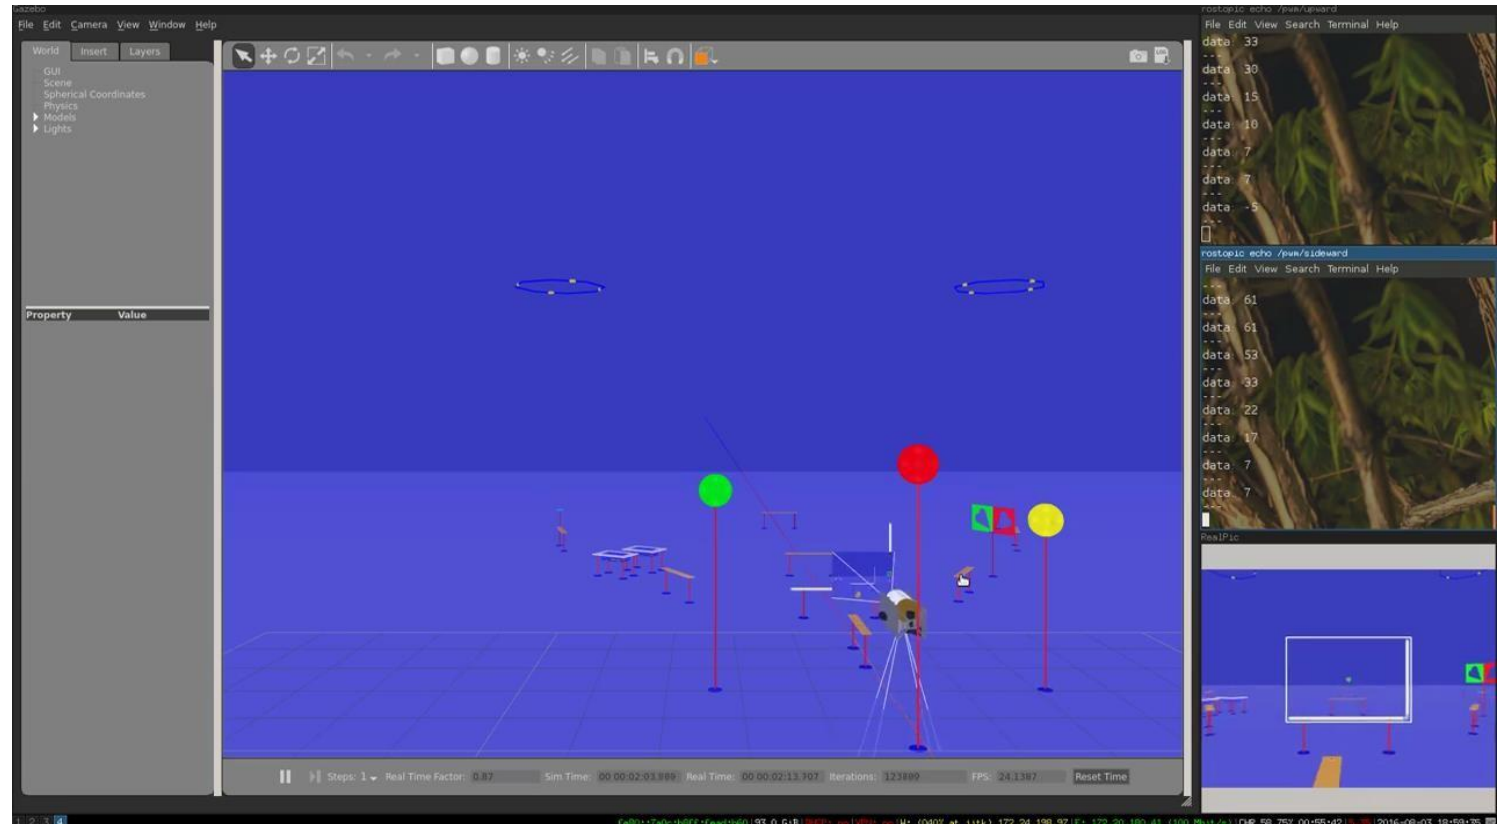

Actually testing our code rather than praying that it'll work!

Tasks

- Task_gate
- Task_line
 - line_detection
 - line_centralize
 - Line_align
- Task_buoy
- Task_torpedo
- Task_octagon

Face of the Team

- Represent team in various exhibitions and conferences held across the country
- Ensures interests of campus community and professors
- Opportunity to connect with industrial professionals and experts
- Publishes papers and newsletters for the team

Marketing and Sponsorships

- Establish tie-ups of the team with various companies.
- Learn methods of influencing companies and alumni to fund the project.
- Learn how to advertise and brand the team.

Doppler Velocity Log

**DID YOU
KNOW?**

Sponsorships required to purchase better sensors and have availability of better services to build the robot.

A new sensor we want to purchase called Doppler Velocity Log is worth INR 13 lakhs!

Expectations from the Team

- **Sub-projects in the groups of 2-3.**
- **Strict deadlines for the work be met.**
- **15-20 hours of work per week.**
- **Have to stay in the winter break during the Winter Camp.**
- **Leaving in-between from the team would lead to no recognition of your work**
- **Above all enthusiasm and dedication for your work and the team**

The Team 2016
